DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-35, drawn to a compound and composition comprising the compound, classified in class 424, subclass 9.5.
 - II. Claims 36-38 and 41-50, drawn to methods of imaging a thrombus or an internal region of a patient or diagnosing diseased tissue, classified in class 424, subclass 9.5.
 - III. Claims 39-40, drawn to a method of lysing a thrombus, classified in class 424, subclass 9.2.
 - IV. Claims 51-53, drawn to a method for therapeutic delivery of a bioactive agent, classified in class 424, subclass 9.2.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a variety of materially different processes of using that product, as demonstrated by the grouping of claims into Inventions II-IV.

Art Unit: 1619

3. Inventions II, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different effects such as imaging an internal region of a patient (group II), lysing a thrombus (group III), and delivering active agents for therapy (group IV).

4. Because these inventions are distinct for the reasons given above and the search required for Groups II-IV is not required for Group I, restriction for examination purposes as indicated is proper.

5. The claims are generic to a plurality of disclosed patentably distinct species comprising compounds of formula IV. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. By species is meant a single compound of formula IV. The compound may be named in any of four ways: 1) according to IUPAC standard, 2) by a pictorial representation of the compound, 3) by setting forth the specific chemical group that each variable of the Markush group represents, or 4) by naming a claim or an example which itself sets forth a single compound.

6. Furthermore, claims 17-35 are generic to a plurality of patentably distinct species of vesicles. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed. By species is meant a single vesicle

type. The constituents of the vesicle (the specific lipid, protein, or polymer; the specific gas; and the specific bioactive agent) must be elected.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

7. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
